# Heavy duty performance meets high design aesthetics

---

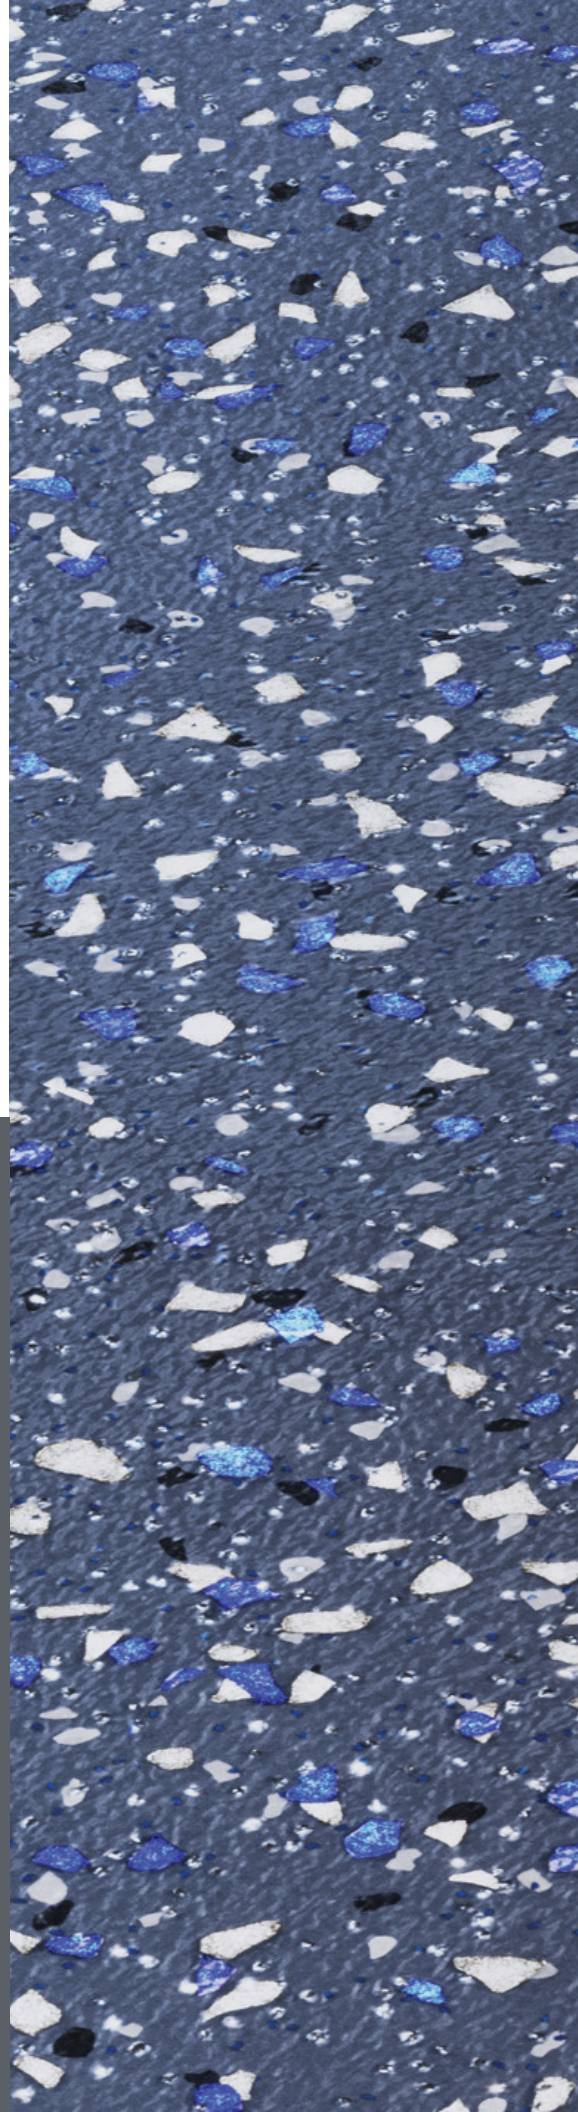

In light of demand from customers for a contemporary, metallic-look safety floor, Altro is pleased to announce the expansion of Altro Transflor Chroma through the introduction of the lightweight, Altro Transflor Chroma Platinum.

Taking its name from the noble metal renowned for its timeless elegance and hard wearing resistance, Altro Transflor Chroma Platinum builds upon the outstanding enhancements made via our HD<sup>+</sup> technology to deliver the ultimate fusion of durability and design.

## A stunning new look with HD<sup>+</sup> performance

The introduction of metallic-look chips in high concentration into the wear layer punctuate base colors with dramatic contrast. They also provide the floor with the long lasting durability critical to everyday demands faced by heavy duty bus services. The result is a contemporary look which is perfectly aligned with the introduction of next generation vehicles.

So, if you're updating your fleet to next generation vehicles, why not add a new element of design?

---

## Next generation design for next generation vehicles

---

The bus industry is in a period of change. The introduction of electric and hydrogen-powered vehicles is seeing unprecedented levels of modernization of buses both inside and out. The pursuit of carbon neutral propulsion and ever increasing passenger expectations has led to the whole industry upping its game. And Altro is no different.

To meet the demands of modernization we have created a new addition to our offer in the form of the striking new, metallic-look Altro Transflor Chroma™ Platinum.

### Forging a new metal

Demonstrating new ways of thinking and presenting modernized interiors are key drivers in increasing engagement with and the use of public transport. Above all else, modern interiors should be clean, safe, comfortable and visually appealing to provide a complete passenger travel experience. And Altro Transflor Chroma Platinum enables you to achieve just that.

When asked for a metallic-look floor capable of withstanding heavy duty demands, Altro explored the best way to deliver both. Experimentation with different materials and particle distribution has enabled us to create a truly resilient, lightweight product imbued with a stylish, contemporary finish. Offering the same incredible performance as our other industry-leading HD+ ranges, Altro Transflor Chroma Platinum is here to help our partners drive towards a clean, safe and sustainable future.

# A complete collection

The Altro Transflor Chroma Collection provides all the performance benefits of our celebrated Heavy Duty Plus technology. Developed to withstand the most challenging daily demands and high foot traffic, the collection is the perfect fit for next generation vehicles.

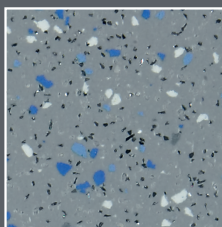

Available in two thicknesses – 2.2mm\* and a unique 2.7mm with an industry-leading 15-year non-prorated warranty – the range offers incredible versatility for vehicles of all sizes. Purposely engineered to minimize weight while maximizing durability, our breadth of options ensure vehicles perform as brilliantly as they look.

Whether used on their own or in contrast with others, every option provides Altro's assured slip resistance to safeguard passengers by mitigating slip risks to just one in a million. And because Altro products are subjected to the most rigorous levels of testing of any flooring in the transport industry, you can be confident their slip performance is sustained for the life of the product.

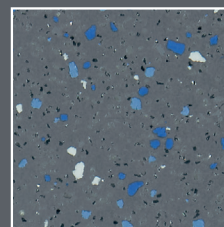

Great design is defined by both style and substance. Don't be tempted to compromise on substitutes that may lose their shine the moment their safety is tested. If you want your vehicles to look good and remain safe, then make sure you always put a plus in your bus.

\* Altro Transflor Chroma Platinum is available in 2.2mm by special order only
